UV Screen Printing Varnish for Plastics, antimicrobial

Series 140-5123-05/01 is a highly transparent UV screen printing varnish based on very resistant raw materials for the coating of plating. The varnish has an antimicrobial mechanism which inhibits enzyme activity and the multiplication of microbes in the presence of moisture or humidity. The active agent released on the coated surface eradicates over 99.99 per cent of germs, with a germ reduction value of > 3 log levels tested according to JIS Z 2801-2010 NORM. Typical applications are labels, signs and promotional items.
